

IMMULITE® 2500

Test Menu for Customers Outside the US

IMMULITE® 2500 is a high-throughput immunoassay system built around the many positive attributes of the IMMULITE® 2000 with the important addition of Logic Driven Incubation (LDI™). LDI technology allows assays to be designed for optimal performance with the fastest possible incubation times. This allows for critical assays such as the cardiac biomarkers and HCG to be run in around 15 minutes. Together with the extensive breadth of menu from the IMMULITE 2000 and the ability to increase the lab's automation with the Sample Management System (SMS™), the IMMULITE 2500 is the ideal system for medium- to high-volume immunoassay laboratories that need to consolidate their testing onto a single platform.
